

# REYNOLDSON SIMMENTALS & ARROW K FARMS

2009

BULL & FEMALE  
PRODUCTION SALE

**SELLING  
81 LOTS**  
of Simmental,  
SimAngus & Angus  
Genetics

*Powerhouse Bulls | Bred Females | Fancy Open Show and Replacement Heifers*

THURSDAY, FEBRUARY 26, 2009  
12:00 NOON SHARP!  
ALBION LIVESTOCK MARKET  
ALBION, NE

**REYNOLDSON  
SIMMENTALS &  
ARROW K FARMS**  
2009 Bull and Female Production Sale

**WELCOME TO OUR  
2009 SALE!**

On behalf of Arrow K Farms, and ourselves, Reynoldson Simmentals, I want to welcome you to our 2009 sale.

The cattle industry never ceases to be a challenge. That's why we both continue to A.I., do ET work and buy the very best herd sires we can. We want you, our customers, to have the best rate of gain possible, create an animal with high marbling ability, good size rib eye and still maintain calving ease.

We won't have as many cows in the sale because we came up with some more pasture this year. We are going to put our donor cow, L102 (Lot 77), in the sale as plus her ET younger full sister, R534, that sells as Lot 70. You will be impressed with their calves – and be sure to save the females. Arrow K will be offering a nice selection of bred cows and a lot of them will be A.I. sired.

You're going to like our bull and heifer selection this year. We will have purebred Simmental and Simmental-Angus percentage bulls and heifers, and we will also have purebred Angus bulls. All the bulls will have ultrasound information, be fertility tested with scrotal measurements and will have the most current EPDs to help you select the best animal on sale day.

Remember, one of the best sources of information is to simply ask us. We know these cows, bulls and heifers upside down and crossways. We can tell you things that are never going to be put on paper. Let us know if we can help. Thank you for your interest in our cattle and attending our sale!

Norm Reynoldson

**REYNOLDSON  
SIMMENTALS**  
Norm & Darlene  
Reynoldson  
& Family

**ARROW K FARMS**  
Larry & Diane Koepke & Family

**OUR CUSTOMERS ARE  
IMPORTANT TO US!**

We bought ten females from Norm. We enjoy their quiet dispositions and how well they milk. They are the type to stay in the herd for a long time. Norm's family and us have become good friends.

Eddie Steptoe New Boston, Texas

We have been using Norm's bulls for about six years. We run around 300 cows (Angus and Black baldy). We primarily use purebred Simmental bulls. I'm satisfied with the calving ease and the rate of gain we get. The quiet disposition makes things go a lot smoother.

Gary Hansen Scotia, Nebraska

# REYNOLDSON SIMMENTALS & ARROW K FARMS

## 2009 Bull & Female Production Sale

Selling 81 Lots of Black  
& Red Polled Genetics

*Simmental | SimAngus | Angus*  
*Herd Bull Prospects • Elite Bred Females*  
*Fancy Open Heifers*

### SCHEDULE

#### WEDNESDAY, FEBRUARY 25, 2009

All Day . . . . . Viewing of Sale Cattle

#### THURSDAY, FEBRUARY 26, 2009

8 am to 12 noon . . . . . Viewing of Sale Cattle

11 am to 12 noon . . . . . Complementary Lunch

12 NOON SHARP . . . . . *Reynoldson Simmental &  
Arrow K Farms 2009 Bull & Female Production Sale*

### DIRECTIONS TO ALBION LIVESTOCK MARKET

2518 Sale Barn Rd., Albion, NE. Take Hwy 14 north to the edge of Albion, then turn right.

### AIR TRANSPORTATION

Omaha, NE . . . . . 125 miles from sale site

# *Bull Buyer's Quick Guide to ASA EPDs and \$ Indexes*

**Expected Progeny Differences (EPDs):** EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit [www.simmental.org](http://www.simmental.org). Listed below are the units ASA EPDs are expressed in:

**All-Purpose Index (API):** Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)

**Back Fat (BF):** Inches of backfat.

**Birth Weight (BW):** Pounds of birth weight.

**Calving Ease (CE):** Percent of unassisted births when used on heifers.

**Carcass Weight (CW):** Pounds of carcass weight.

**Maternal Calving Ease (MCE):** Percent of unassisted births in first-calving daughters.

**Milk (MLK):** Pounds of weaning weight due to milk.

**Marbling (MRB):** Marbling score.

**Maternal Weaning Weight (MWW):** Pounds of weaning weight due to milk and growth.

**Ribeye Area (REA):** Square inches of ribeye.

**Warner-Bratzler Shear Force (WBSF):** Pounds of force required to shear a steak.

**Stayability (STAY):** Percent of daughters remaining in the cowherd at 6 years of age.

**Terminal Index (TI):** Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)

**Weaning Weight (WW):** Pounds of weaning weight.

**Yearling Weight (YW):** Pounds of yearling weight.

**Yield Grade (YG):** Yield grade score.

**\$ Indexes:** Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

**All-Purpose Index (API):** Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

**Terminal Index (TI):** Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

**Using API and TI:** First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a \$50 bull if both are exposed to 30 cows over 4 years ( $\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$ ). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit [www.simmental.org](http://www.simmental.org).
