12 Noon Sharp!

At the Farm • LeRoy, Minnesota

Selling 100 Lots of Simmental, SimAngus and Angus Genetics
Bulls • Bred Heifers • Fancy Open Show Heifer Prospects

WELCOME TO THE 2010 BULLS-EYE BONANZA!

We, at Grass-Lunning Simmentals, would like to invite you to the 2010 Bulls-Eye Bonanza Sale to be held at the farm in LeRoy, MN. We want to take this opportunity to thank our past buyers, and we look forward to sharing our program with all prospective buyers. We are very excited about this year's offering! These cattle are some of the most elite genetics offered anywhere.

We take pride in our commitment to providing our customers with cattle that have moderate birth weights, above average weaning and yearling weights, exceptional dispositions and, above all else, consistency. I am confident that you will find this offering very appealing to all phases of the beef industry - from "pasture to plate".

We want to give a heartfelt "thank you" to Tom and Judy Golly of Golly Farms, the Ward Family of Four Winds Angus and Steve and Mary Lunning of Lunning Brothers Simmentals for bringing the kind of genetics that make this sale possible.

We hope you join us at the farm on Saturday, February 13th. Please come early to view the cattle and enjoy a complimentary lunch. The sale will begin at 12:00 noon. Cattle are available for viewing anytime prior to the sale. Please contact me with any questions you may have. We look forward to seeing you on sale day.

Sincerely,
Bob Grass, Grass-Lunning Simmentals

GLS/GF MISS FRONTIER U30

This bull is a 1/2 brother to Hunter Aggen's "Shorty" heifer that won several shows this past year. Warrior is a very stout, very sound bull with tons of rib shape and capacity. This young stud will make great replacement females as well as bull prospects. This bull's dam has never missed in three calves. Predictability is bred into this great herd sire.

Every year a bull becomes a favorite and this year W75 has done it. This powerful constructed, big bodied, heavy muscled son of Combination has jumped through all the hoops. He had a 875# adj. ww and hasn't stopped there. He will be our lead bull in Denver and will get some attention. This bull is a can't miss.

RR Emma 9823

Logix is a rancher's bull that we have been using ourselves the past 2 seasons. His calves come easy and grow! Logix is an embryo calf out of our best Emma donor. A full brother to Logix was a top seller in last years MN Angus Breeders Sale.

2009 NORTH STAR CLASSIC CHAMPION HEIFER

Bull Buyer's Quick Guide to ASA EPDs and \$ Indexes

Expected Progeny Differences (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org. Listed below are the units ASA EPDs are expressed in:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario.
(See below for more details.)

Back Fat (BF): Inches of backfat.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Marbling score.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of ribeye.

Warner-Bratzler Shear Force (WBSF): Pounds of force required to shear a steak.

Stayability (STAY): Percent of daughters remaining in the cowherd at 6 years of age.

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Yield grade score.

\$ Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a \$50 bull if both are exposed to 30 cows over 4 years ($\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org.
